Projects

DecepticoNLP

Adversarial Machine Learning

OPEN SOURCE PROJECT, LEAD DEVELOPER

March 2020 - Present

- DecepticoNLP is a Python based PyTorch Wrapper for robustness monitoring and adversarial debugging of NLP models powered by Travis CI.
- DecepticoNLP has implementations of various character & word level adversarial perturbations for text.

FlaiReddit

Natural Language Processing

MACHINE LEARNING WEBAPP

Apr 2020

- Built a complete text classification web-app using Python and PyTorch and deployed it on Heroku which scrapes data from Reddit, pre processes and classifies its flair tag using Transformers.
- The data extractor extracts posts from a wide time period to eliminate the Bias towards some hot topics and compares runtime and implements a minimal bayes classifier.

Sherlocked

Natural Language Processing

INDEPENDENT PROJECT

May 2019

- Built a text generator using LSTMs, Attention Mechanism and Transformers with TensorFlow trained on prose like Sherlock Holmes, Harry Potter and poems by John Keats.
- The project also demonstrates the joint training on Sherlock Holmes and Harry Potter to highlight the successes and failures in performance on training on semantically different literature.
